Platja d'Aro (Spain)

Platja d'Aro completes the equipment of its beaches with changing cabins to guarantee a better service to the inhabitants and tourists who want to enjoy these spaces.

The constant improvement and evolution of our products may result in some modifications of the technical specifications and characteristics of the products without prior notice.

More and more city councils decide to complete their beach equipment with the aim of having more accessible spaces, thus guaranteeing a better service to inhabitants and tourists.

Platja d'Aro has installed eleven of BENITO's changing cabins so that bathers can change their clothes and preserve their privacy at a few metres from the beach.

Changing cabins made of pine wood treated in vacuum pressure autoclave class IV against woodworm, termites and insects, and with a Dibond panel with a customised printing which makes them unique and exclusive.

The constant improvement and evolution of our products may result in some modifications of the technical specifications and characteristics of the products without prior notice.
