## Cassà de la Selva (Spain)

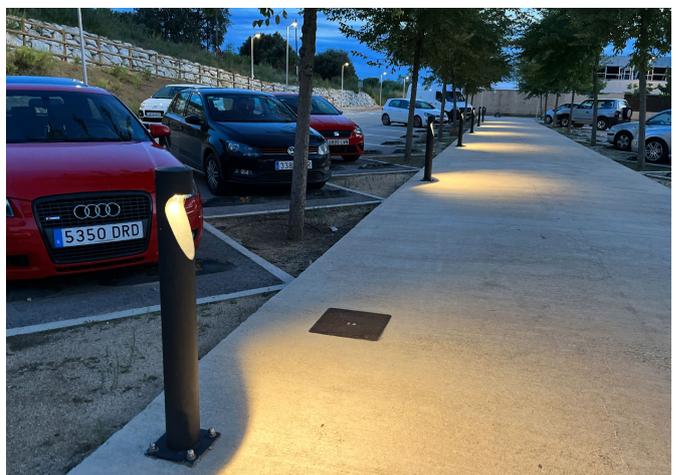

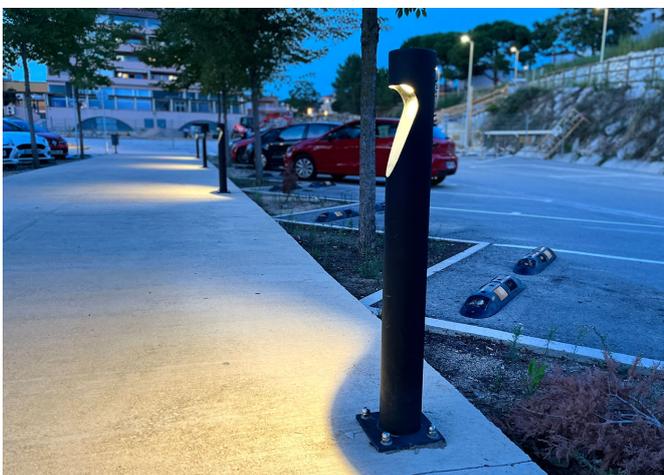

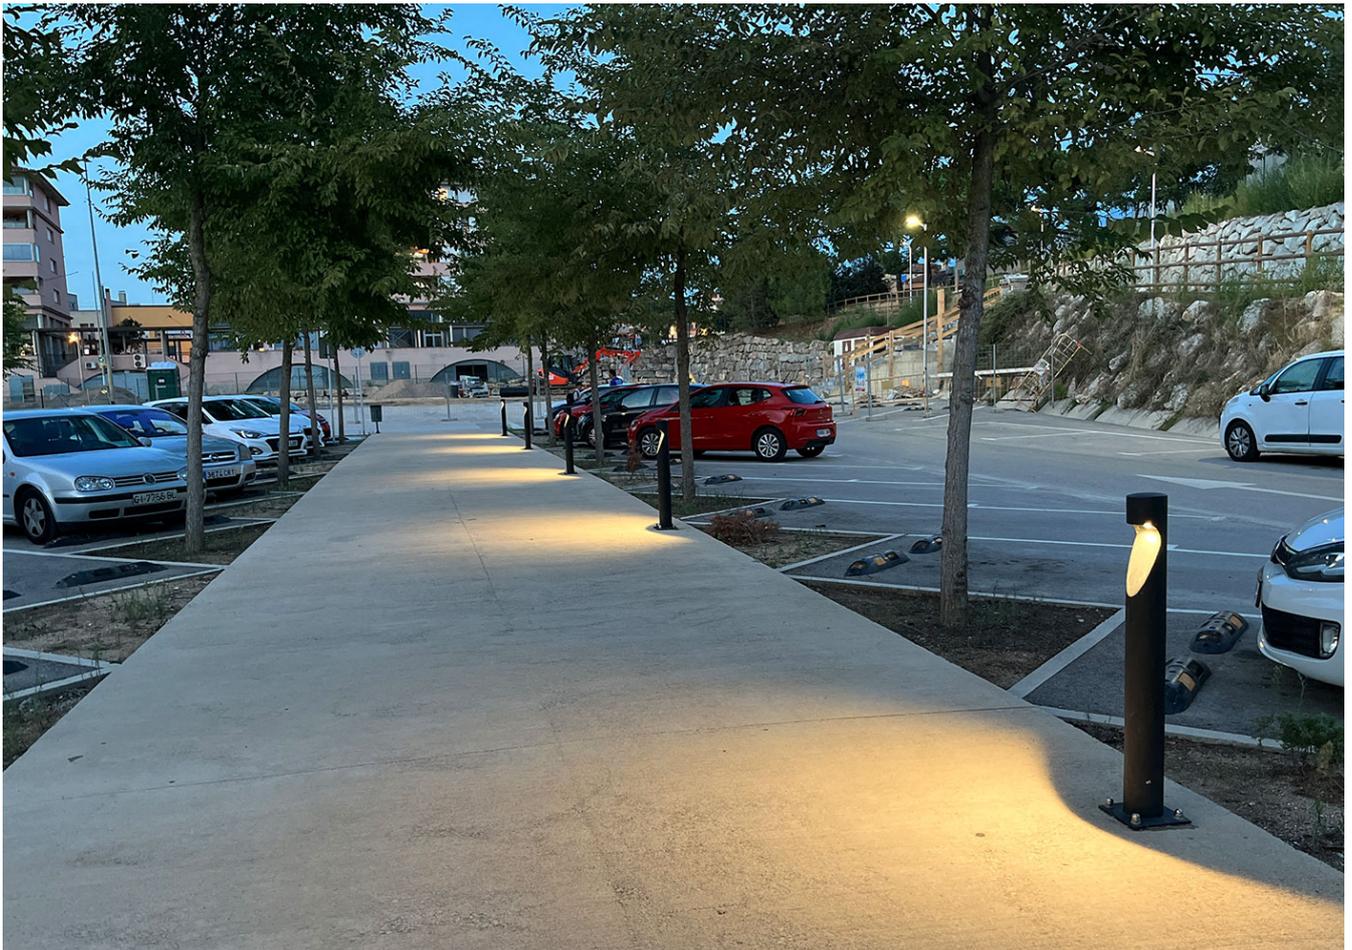

Cassà de la Selva instalts LED beacons in the city's sports area, thus creating a non-intrusive lighting respectful of the environment and improving the visibility of the area in order to increase road security.

Lis model LED beacons have been installed in Cassà de la Selva. This is a key element of additional lighting in pedestrian areas to increase road security while creating nocturnal scenographies that highlight the architectural beauty of each place. Its neutral yet elegant aesthetic brings a touch of distinction both during the day and at night. It is ideal for pedestrian areas, promenades, parks and greenways.

The Lis beacon includes a new light engine developed with the most advanced technology. This product meets the needs of the market regarding efficacy and lifespan and reduces maintenance costs.
