

BENITO

-Street Lighting

Salou (Spain)

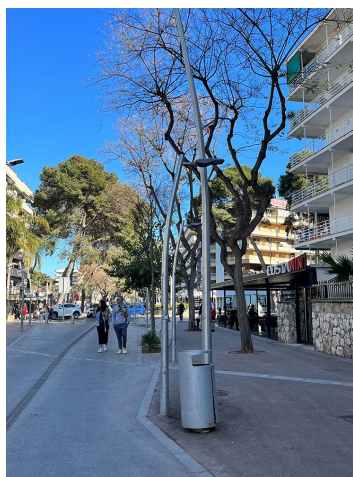

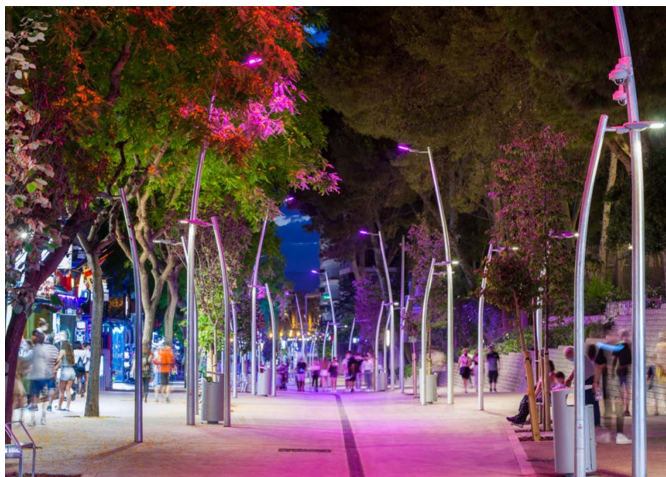

The city of Salou in Tarragona has installed BENITO lighting managed through the DMX system in its most popular avenue.

The coastal town of Salou has dozens of Ter lighting points installed on Carles Buigas Avenue, with 7-meter Milan XXL RGBW floodlights and 4-meter Milan S40 luminaires. They are complemented by cylindrical poles. All the light points include LED technology and are controlled with the DMX remote management system through a touch screen to generate waves of colour on one of the main commercial arteries of the town.

The DMX control system achieves an attractive lighting and allows for good energy and economic performance.
