-Street Lighting

Banyoles (Spain)

The City Council of Banyoles has concluded the works to improve and optimise the exterior lighting of the Miquel Coromina Moretó stadium.

Apolo M
APAM

The works have allowed to replace metal halide lamps that generated an important light pollution in high points of the city near the stadium by BENITO NOVATILU's **Apolo 1000W LED**. This floodlight causes no light pollution, has an excellent luminous efficacy and a new control system. Thus, a better light efficiency and economic savings are achieved, reducing expenses by half.

Moreover, with this project, the quality of the lighting will be improved with optimal conditions of lighting uniformity.

The constant improvement and evolution of our products may result in some modifications of the technical specifications and characteristics of the products without prior notice.
