

Girona installs a bicycle parking area with the dual aim of offering a safe place to store bicycles and promoting sustainable mobility

In Girona's Parc Central, next to the high-speed train station, the bus station and close to the Renfe train station, a parking area with a capacity for 70 bicycles has been installed. It is made of a metal structure based on coloured laminated profiles and is designed to be flexible so that it can be expanded or reduced, or moved to another location if required in the future..

Inside the parking area there is space for 60 bicycles and an area with capacity for 10 bicycles of a special width or size. It has 12 lockers, a self-repair point and is operated through a mobile application with prior registration.
