## STAINLESS STEEL AUTOMATIC BOLLARDS

Semi-automatic, high-security,  
fixed, removable, flexible...

Automatic Ø220  
Automatic Ø275

Semi-automatic Ø220  
Semi-automatic Ø140  
Semi-automatic Ø114

Removable Ø114

With LED luminous ring

Petrus bollards  
Fixed, made of concrete

SECURITY AND ACCESS CONTROL SOLUTIONS.

Our experience and continuous research have allowed us to develop a range of bollards **able to meet all needs**, including the most demanding ones.

The success and strength of our products are based on quality as well as our customers' satisfaction. **BENITO is the right choice** and we keep proving it in every installation.

Our goal is to maintain a firm commitment to new trends by the specialisation of our research, development and manufacturing departments, thus allowing us to grow.

- Automatic Bollards.
- Security Bollards.
- Semi-Automatic Bollards.
- Removable Bollards.
- Flexible Bollards.
- Rubber Bollards.
- Fixed Bollards.
- Speed Reducers.
- Access Control.
- Automation Accessories.
- Control Equipments.

Installation of a 750mm high high-security **automatic bollard** in a car dealership.

Installation of a 600mm high high-security **AUTOMATIC BOLLARD** in the headquarters of the Spanish Ministry of Defence in the Paseo de la Castellana in Madrid.

Installation of a 600mm high **AUTOMATIC BOLLARD** with two traffic lights. Intercom and pass reader integrated in the stainless steel **TOTEM**.

# Automatic bollard with remote control and LED luminous ring, Ø220 and 600mm height

4mm thickness (reference H6004R)  
8mm thickness (reference H6008R)

## Bollard designed to control the access to the public road, condominiums, companies, etc.

Operation by remote control or other devices.

High visibility thanks to its **LED ring, traffic light function**.

**Positive security**, if the power supply is cut out, the stem lowers.

### Optional: immediate safety response

The magnetic loop detects vehicles and lowers the bollard automatically. In case of people or other obstacles, a pressure sensor will operate to lower the bollard to the slightest sign of impact.

# How to control the rising and lowering of the automatic bollard?

## How to lower the bollard?

**Remote control** and radio receiver to activate the automatic bollard.

Proximity reader via radio for **proximity key rings or passes**.

Long range reader **similar to electronic tolls** to detect the pass automatically.

Electric lock **to lower automatic bollards with a key**.

## How to communicate with us if there is an incident?

Thanks to the **video intercom kit**, we receive the video call on a mobile phone or control tablet.

## How to allow an easy access to users?

For regular users, **enter their plate number in the database** so that the automatic bollard lowers after the plate is read.

# What happens if an **emergency vehicle** needs to access a restricted area?

Allows the entry of ambulances, firefighters or the police **without having to stop**. Thanks to the **sound detector**, the bollard lowers when sirens are on.

## Which components need to be installed to control the bollard remotely?

Routers to control the bollard remotely from a PC. These devices **inform if there is a fault as well as allowing the user to know the condition of the bollard and solve problems remotely.**

The ideal solution to control the bollard remotely.

Optional: WIFI, GSM or ETHERNET.

In case of incident, **the bollards can be lowered via a free phone call** thanks to a module which integrates a SIM card.

**Timer to program** the operation of the bollard: daily or weekly schedule, etc.

## You do not have an electrical installation?

**Solar-powered** system to supply voltage (230V) to automatic bollards.

**Power kit with batteries** for automatic bollards that charge at night, using the street lighting installation.

## Other accessories for installations with automatic bollards.

Heating kit for the automatic bollard to **prevent the freezing of bollards installed in cold environments**, with automatic control.

**Traffic light with LED technology** for outdoors, resistant to water and moisture.

Stainless steel **control totem** with LED luminous ring, **traffic light function.**

Metallic mass detector to **detect the presence of vehicles**, preventing the bollard from rising, thus avoiding impacts.

# Semi-automatic bollard with reflective band, Ø114mm and 500mm height
